

CUSTOMER INQUIRY MANAGEMENT SYSTEM

Trigger: New Email in Gmail

Whenever a new email is received in Gmail, this automation will be triggered.

Action 1: ChatGPT (Classify Text)

Use ChatGPT to classify the email based on its content. It will be categorized into one of the following types:

- Sales Lead, Support Request, Customer Inquiry, Others

Paths Based on ChatGPT classification

Path A: Sales Lead

1. ChatGPT (Summarize Text)

Use ChatGPT to generate a concise summary of the email.

2. Slack (Send Channel Message)

Send a message to the sales team in Slack about a new email, include: a ChatGPT summary of the email.

3. Salesforce (Create Contact)

Automatically create a new contact in Salesforce with the following data:

- Name, Email, Title of the Email

Path B: Support Request

1. Slack (Send Channel Message)

Send a Slack message to the support team notifying them of the new support request, include:

- Customer's Name, Email Title

CUSTOMER INQUIRY MANAGEMENT SYSTEM

2. Gmail (Send Email)

Automatically send an email to the customer, informing them that their request has been received and is being handled.

Path C: Customer Inquiry

1. Gmail (Send Email)

Send an automatic email to the customer, for example: "We've received your inquiry and our team will get back to you shortly with more details." Include the customer's name in the email.

2. Zapier Formatter (Calculate Due Date)

Format the email received date and add 2 days to create a follow-up date for handling the inquiry.

3. Asana (Create Task)

Automatically create a task in Asana for the follow-up, with the following fields:

- Due At: The date calculated using Zapier Formatter (2 days after email received), Task Name: The email's subject, Information: The body of the email, Email Address: The sender's email address

Path D: Others

1. ChatGPT (Conversation)

Use ChatGPT to create an appropriate reply to the email message.

2. Gmail (Create Draft)

Automatically create a draft in Gmail, pre-filled with the ChatGPT-generated response.
