---------------------------	----

WELCOME!

Hello Dear Students!

I have spent **a lot of time** preparing this course and book for you. I hope you enjoy it!

If you do, **please take 30 seconds** to leave an honest review or rating. Your feedback **HELPS ME** a lot!

FORM RESPONSE SYSTEM

Trigger: Form Submission

Whenever a form is submitted, this automation will be triggered. The form should include the following information:

- Name, Email Address, Message

Action 1: Gmail (Send Email)

Automatically send the thank-you email to the person using Gmail, with the following fields:

- **To:** Email Address (from the form submission)
- **Subject:** Personalized subject, such as "Thank You for Your Submission, [Name]!"
- **Body:** The personalized message, include: the person's name, message as confirmation

CUSTOMER INQUIRY MANAGEMENT SYSTEM

Trigger: New Email in Gmail

Whenever a new email is received in Gmail, this automation will be triggered.

Action 1: ChatGPT (Classify Text)

Use ChatGPT to classify the email based on its content. It will be categorized into one of the following types:

- Sales Lead, Support Request, Customer Inquiry, Others

Paths Based on ChatGPT classification

Path A: Sales Lead

1. ChatGPT (Summarize Text)

Use ChatGPT to generate a concise summary of the email.

2. Slack (Send Channel Message)

Send a message to the sales team in Slack about a new email, include: a ChatGPT summary of the email.

3. Salesforce (Create Contact)

Automatically create a new contact in Salesforce with the following data:

- Name, Email, Title of the Email

Path B: Support Request

1. Slack (Send Channel Message)

Send a Slack message to the support team notifying them of the new support request, include:

- Customer's Name, Email Title

CUSTOMER INQUIRY MANAGEMENT SYSTEM

2. Gmail (Send Email)

Automatically send an email to the customer, informing them that their request has been received and is being handled.

Path C: Customer Inquiry

1. Gmail (Send Email)

Send an automatic email to the customer, for example: "We've received your inquiry and our team will get back to you shortly with more details." Include the customer's name in the email.

2. Zapier Formatter (Calculate Due Date)

Format the email received date and add 2 days to create a follow-up date for handling the inquiry.

3. Asana (Create Task)

Automatically create a task in Asana for the follow-up, with the following fields:

- Due At: The date calculated using Zapier Formatter (2 days after email received), Task Name: The email's subject, Information: The body of the email, Email Address: The sender's email address

Path D: Others

1. ChatGPT (Conversation)

Use ChatGPT to create an appropriate reply to the email message.

2. Gmail (Create Draft)

Automatically create a draft in Gmail, pre-filled with the ChatGPT-generated response.

EMAIL DATA STORAGE SYSTEM

Trigger: New Email in Gmail

Whenever a new email is received in your Gmail account, this automation will be triggered.

Action 1: Google Sheets (Create Spreadsheet Row)

Automatically save the following data from the email into a Google Sheets document:

- Subject: Email's title
- Email Address: Sender's email address
- Message: Body of the email

Action 2: Google Drive (Upload File)

Automatically save any attachments from the email to a specified folder in Google Drive.

JOB APPLICATION SYSTEM

Trigger: Google Forms

Create a Google Form to collect job applicants details:

- Name
- Email
- Requested Position
- Experience

Action 1: Google Sheets

Save information received from google forms (Name, Email, Requested Position, Experience) in a Google Sheet.

Action 2: Delay by Zapier

Add a delay of 24 hours before sending the follow-up email to make the process feel more personal.

Action 3: Send Email

After the delay, automatically send a personalized thank you email to the job applicant. It should contain variables from google forms: name, requested position.

CUSTOMER SERVICE CHATBOT

Trigger: Google Forms

Create a Google Form to collect customer service requests. The form should include the following fields:

- Customer Name
- Email
- Issue Description
- Optional File Upload

Action 1: Google Sheets

Automatically insert the information received from Google Forms (Customer Name, Email, Issue Description) into a Google Sheet for tracking and future reference.

Action 2: Delay by Zapier

Add a delay of 2 hours before responding to the customer.

Action 3: ChatGPT

Use AI to generate a response to the customer's issue based on the Issue Description field. The AI should analyze the issue and create a relevant and professional response.

Action 4: Gmail

Send the email back automatically to the customer. The email should contain: customer's name, ai response.

FACEBOOK MESSENGER AI CHATBOT

Trigger: New Message Sent to Facebook Page (via Messenger)

- When someone sends a message to your Facebook Page via Facebook Messenger, this will trigger the automation.
- Trigger Details: Capture the user's message, including their name and content.

Action 1: Conversation with Assistant (ChatGPT)

Use ChatGPT to analyze and generate a response based on the message content.

- Example Use: If a user asks for product recommendations, the AI will generate a response providing personalized suggestions based built-in knowledge.

Action 2: Send Message Back via Facebook Messenger

After ChatGPT generates the response, automatically send that message back to the user via Facebook Messenger.

- Personalization: The response is personalized based on the original message sent by the user.
- Example: If the user asks, "What is your best AI course?", ChatGPT could respond with, "Our best AI course is the 'AI Mastery Bundle,' which covers all foundational and advanced concepts."

CUSTOMER SERVICE RESPONSE SYSTEM

Trigger: Google Forms

Create a Google Form to collect feedback from course participants. The form should include:

- Name
- Email
- Course Rating (1-5)
- Review

Action 1: Classify Text Using AI

Use AI to analyze the feedback provided in the “Review” field. The AI will classify the feedback as positive, neutral, or negative based on the sentiment and key themes in the text.

Action 2: Google Sheets

Automatically log the feedback data (Name, Email, Course Rating, and Review) into a Google Sheet.

Action 3: Discord Notification

Send a notification to a designated Discord channel, informing your team of a new course feedback submission. It should include: customer's name, email, and review.

CUSTOMER SERVICE RESPONSE SYSTEM

Step 4.1: Split Automation into Two Main Paths Based on Rating

Path A: Reviews with a rating below 4 stars (ratings of 3, 2, or 1).

Path B: Reviews with a rating above 3 stars (ratings of 4 or 5).

Step 4.2: Further Split Each Main Path into Two Sub-Paths Based on Sentiment

For Path A (Below 4 Stars):

- Path C: If the feedback is negative (e.g., rating of 1-2 stars or AI detects negative sentiment).
- Path D: If the feedback is neutral (e.g., rating of 3 stars or AI detects neutral sentiment).

For Path B (Above 3 Stars):

- Path E: If the feedback is neutral (e.g., rating of 4 stars but AI detects neutral sentiment).
- Path F: If the feedback is positive (e.g., rating of 5 stars or AI detects highly positive sentiment).

Step 4.3: Create Personalized Emails for Each Path

Path C (Negative Review - Below 4 stars):

- Send an apology email, acknowledging the negative feedback and offering assistance.

Path D (Neutral Review - Below 4 stars):

- Send a polite thank-you email, asking for any specific suggestions for improvement to make the course better.

Path E (Neutral Review - Above 3 stars):

- Send a thank-you email, acknowledging the feedback and asking for suggestions on how to improve the course.

Path F (Positive Review - Above 3 stars):

- Send a thank-you email, requesting the customer to share their positive experience on public platforms.

AI-POWERED CRM SYSTEM

Trigger: Google Forms

Create a Google Form to capture customer inquiries. The form should include:

- First Name, Last Name, Email Address, Phone Number, List of Products/Services to Choose, Lead Source (eg. social media, google search), Budget, Description of Client Needs.

Action 1: Salesforce (Create Lead)

Automatically create a new lead in Salesforce. Fields to include:

- First Name, Last Name, Product Chosen (in title field), Email Address, Phone Number.

Action 2: AI to Qualify Lead (Use Classify Text)

Use ChatGPT to analyze the inquiry provided in the form and classify the lead, based on:

- Cold Lead, Warm Lead, Hot Lead

Action 3: Google Sheets

Insert all lead information and lead score from action 2 in a Google Sheet for backup and easy reference. Columns to include:

- First Name, Last Name, Email, Phone Number, Product/Service, Lead Source, Lead Score, Budget, Description, Submission Date

Action 4: Gmail (Send Personalized Follow-Up Email & Use Zapier Paths)

- Send a personalized follow-up email to the lead based on the AI classification:
 - Hot Lead: Send an email encouraging to book a meeting with a link.
 - Warm Lead: Send an email offering more information and asking for any questions.
 - Cold Lead: Send a softer email offering educational resources or additional time.

CLIENT ONBOARDING WORKFLOW

Trigger: Salesforce (New Contact Created)

Whenever a new contact is added in Salesforce, this automation will be triggered.

- First Name, Last Name, Email Address, Phone Number, Product (in title field).

Action 1: Slack (Send New Contact Notification)

Automatically send a notification to a specific Slack channel when a new contact is added in Salesforce. The message contains:

- Contact Name, Phone Number, Product (random).

Action 2: Formatter by Zapier

Use Zapier formatter to calculate the due date for the follow-up task:

- Add 24 hours to the "Contact Created Date" from Salesforce.

Action 3: Asana (Create Task with Due Date)

Automatically create a task in Asana to remind the team to follow up with the new contact. The task should include:

- Task Name (Random)
- Due Date: The date calculated by Formatter by Zapier
- Task Description: Include the contact's name, phone number.

Action 4: Slack (Send Confirmation)

Once the task has been created in Asana, send a confirmation message to the Slack channel to notify the team that the onboarding is completed. The message should include:

- Contact Name, Message Text that onboarding is completed.

TASK PRIORITISATION SYSTEM

Trigger: New Task in Asana

When a new task is added to Asana (with task name, field to provide description), this triggers the workflow.

Action 1: Classify Task with ChatGPT

The task description is analyzed by ChatGPT to determine the task's priority:

- High Priority
- Medium Priority
- Low Priority

Action 2: Split into Paths for Each Priority

- Path A: High Priority
- Path B: Medium Priority
- Path C: Low Priority

For Each Path:

Action 3: Update Task in Asana

Fields to Update:

- Assignee: Assign the task to the most appropriate team member.
- Task Description: Include "Priority: Low, Medium, or High" from ChatGPT analysis.
- Due Date: Set the due date from the creation time:
 - For High: 48 hours to do the task.
 - For Medium: 3 days to do the task.
 - For Low: 7 days to do the task.

TASK PRIORITISATION SYSTEM

Action 4: Slack Notification

Send a message in Slack, notifying the team of the new task.

- Message Content: Task Name, Assignee, Due Date

Action 5: Zapier Formatter (Subtract Time for Reminder)

Subtract specific amount of time from the due date to create a reminder date that will be 24 hours before deadline for task is.

- eg. high priority 7 days = Time to accomplish the task from Asana --> 7 days - 6 days = 24 hours.

Action 6: Delay Until Reminder

Action Event: Delay Until (using the reminder date calculated in the previous step)

Action 7: Send Slack Reminder

Send a reminder 24 hours before the task is due.

SOCIAL MEDIA AUTOMATION

Trigger: Facebook Post Created

Whenever a new post is made on Facebook, this automation will be triggered.

- The post should contain: Title, post content, link, image.

Action 1: ChatGPT (Extract Structured Data)

Use ChatGPT to extract structured data from the Facebook post.

- Extract: Post text, post title, image URL, and link from the content.

Action 2: ChatGPT (Summarize Text)

Use ChatGPT to summarize the post content to fit Pinterest's character limit (max 500 characters for Pinterest).

Action 3: LinkedIn (Publish Post)

Automatically publish the summarized post on LinkedIn.

- Fields to Include: Summarized text from ChatGPT, post title, extracted link, image URL from Facebook.

Action 4: Slack (Send LinkedIn Notification)

Send a notification to a specific Slack channel after the LinkedIn post has been published.

- Message Content: Notify the team that the post has been published on LinkedIn, including the post title.

Action 5: Filter (Check for Image)

Use a filter to check if the Facebook post contains an image.

- Condition: If an image exists in the Facebook post.

SOCIAL MEDIA AUTOMATION

Action 6: Pinterest (Publish Post)

If the condition from Action 5 is met (image exists), automatically publish the content on Pinterest.

- Fields to Include: Link, image, post title, description.

Action 7: Slack (Send Pinterest Notification)

Send a notification to the Slack channel after the Pinterest post has been published.

- Message Content: Notify the team that the post has been published on Pinterest, including the post title.

TASK MANAGEMENT AUTOMATION

Trigger: New Asana Task Created

Whenever a new task is created in Asana, this automation will be triggered. The task will include the following information:

- Task Name, Due Date, Task Information

Action 1: Classify Task Priority Using ChatGPT

Use ChatGPT to classify the task based on the information provided in Asana. The task will be categorized into one of the following priority levels:

- Critical, High, Medium, Low

Action 2: Create Record in Zapier Tables

Automatically create a new record in Zapier Tables with the following fields:

- Task Name, Due Date, Task Priority (from ChatGPT), Task Status (set as "Open"), Task Information (from Asana)

Action 3: Create Zapier Interface

Create a Zapier Interface that displays the records from Zapier Tables. The interface will contain a page with:

- Table from Zapier Tables, Link 1 (Asana Project), Link 2 (Slack Channel)

Action 4: Formatter by Zapier (Calculate Reminder Date)

Use Formatter by Zapier to subtract 24 hours from the task's due date to calculate the reminder date.

TASK MANAGEMENT AUTOMATION

Action 5: Delay Until Reminder Date

Use Delay by Zapier to delay the workflow until the date calculated by the formatter.

Action 6: Send Slack Reminder

Send a reminder in Slack 24 hours before the task's deadline. The Slack message should include:

- Task Name, Task Priority (from ChatGPT)

Action 7: Update Task in Asana (Set as Done)

Once the task is completed, update the task in Asana and set its status to "Done."

EVENT PLANNING SYSTEM

Trigger: New Event Added to Google Calendar

Whenever a new event is added to Google Calendar, this automation will be triggered. The event includes the following fields:

- Event Title, Description, Start Date, End Date, Attendees.

Action 1: Classify Event Type Using ChatGPT

ChatGPT will classify the event into one of three types: Meeting, Workshop, or Social Event, based on the event's description.

Action 2: Paths Based on Event Type

The automation will be divided into three paths based on the event type.

Path A: Meeting

1. ChatGPT Conversation (Create Meeting Agenda)

Use ChatGPT to generate structured meeting activities based on the event description.

2. Zapier Tables (Store Meeting Data)

Save the event type (ChatGPT), agenda, event title, start & end date, and attendees, in Zapier Tables.

Path B: Workshop

1. ChatGPT (Create Workshop Resources)

Use ChatGPT to generate useful links to the resources for the workshop based on the event description.

2. Zapier Tables (Save Resources)

Save the generated resources and event details in Zapier Tables (event type, event title, start & end date, and attendees)

3. Slack (Notify Team About Workshop)

Notify the team in Slack about the upcoming workshop, including the event title and resources.

EVENT PLANNING SYSTEM

4. Delay Until Event End Date

Delay actions until the workshop's end date.

5. Formatter by Zapier (Text to Line-item)

Extract attendees' emails from the list.

6. Looping by Zapier (Send Emails)

Create a loop to send emails to all attendees.

7. Gmail (Send Emails)

Send workshop details and resources to attendees via Gmail.

Path C: Social Event

1. ChatGPT (Create Fun Reminder)

Use ChatGPT to create a fun reminder for the event, based on the event description.

2. Zapier Tables (Save Reminder)

Save details in Zapier Tables (event type, event title, start & end date, and attendees)

3. Formatter by Zapier (Calculate 24-Hour Reminder)

Subtract 24 hours from the event start date to calculate the reminder time.

4. Delay Until 24 Hours Before Event

Delay the reminder message until 24 hours before the event.

5. Discord (Send Reminder)

Send a fun reminder to the participants via Discord.

PROJECT FEEDBACK SYSTEM

Trigger: Task Completed in Project

This automation is triggered when a task in the project is marked as completed. The task includes the following details:

- Project Title, Assignee, Due Date, Information, Completion Report, Completion Date, Next Steps

Action 1: Analyze Sentiment Using ChatGPT

ChatGPT will analyze the project completion report and title, then classify the sentiment as Positive, Neutral, or Negative.

Action 2: Paths Based on Sentiment Classification

The automation will split into three paths based on the sentiment: Negative, Neutral, and Positive.

Path A: Negative Sentiment

1. ChatGPT (Generate Recommendations)

Use ChatGPT to generate detailed recommendations to address the problems identified in the project based on completion report..

2. Slack (Notify Team)

Send a Slack message to the team, informing them that the project did not meet expectations. The message will include the project name and ChatGPT's recommendations for improvement.

Path B: Neutral Sentiment

1. ChatGPT (Generate Insights for Improvement)

Use ChatGPT to provide insights on how the project can be improved based on the completion report.

2. Zapier Tables (Store Data)

Store the following data in Zapier Tables:

- Project Name, Completion Date, Feedback (from ChatGPT), Assignee

PROJECT FEEDBACK SYSTEM

3. Slack (Notify Team)

Send a Slack message to the team, summarizing the neutral sentiment and highlighting the need for improvements. The message will include the project name and ChatGPT's suggestions for improvement.

Path C: Positive Sentiment

1. ChatGPT (Suggest Next Steps)

Use ChatGPT to suggest next steps for the project, based on the completion report.

2. Zapier Tables (Store Data)

Store the following data in Zapier Tables:

- Project Name, Completion Date, Feedback (from ChatGPT), Assignee

3. Asana (Update Task)

Update the task in Asana with the next steps suggested by ChatGPT to ensure follow-up actions are clear and documented.

ZAPIER CHATBOT - TEMPLATE

Describe Persona: Customer Service Expert

Project Description: Create a customer service specialist to assist customers, provide detailed answers, and resolve issues efficiently. The focus is on handling inquiries, resolving complaints, and offering personalized service.

Interaction Style: Professional and empathetic tone with clear and concise communication.

Usage Scenarios: Customer support tickets, live chat interactions, and FAQ responses

Format: Use clear, step-by-step responses, FAQs, and concise solutions to customer issues.

Specific Instructions: Identify common customer issues, provide troubleshooting steps, resolve complaints, and offer personalized service responses.

Additional Notes: Focus on customer satisfaction, using active listening, empathy, and the latest customer service best practices.

CHATGPT CHATBOT - TEMPLATE

[Purpose]: This Custom GPT is designed to act as an expert Facebook Messenger chatbot, managing customer inquiries, resolving issues, and delivering information to enhance customer engagement and support.

[Capabilities]:

- Troubleshooting common customer issues
- Providing detailed product and service information
- Guiding users through step-by-step processes
- Gathering customer feedback for continuous improvement
- Offering proactive solutions to common customer needs

[Interaction Style]: The chatbot communicates in a friendly, approachable, and professional manner, ensuring responses are clear, concise, empathetic, and patient, tailored to the informal yet respectful tone typical of Facebook Messenger interactions.

[Usage Scenarios]:

- Addressing billing and payment questions
- Assisting with technical troubleshooting
- Delivering product information and recommendations
- Guiding users through setup and installation steps
- Handling return and exchange requests
- Providing proactive customer support and updates
