## Trigger: New Lead in Salesforce

This automation triggers whenever a new lead is created in Salesforce. The lead should include the following details:

- First Name, Last Name, Email Address, Job Title, and Lead Description (can be added in any field).

## Action 1: Classify Lead Using ChatGPT

Use ChatGPT to analyze the description of the lead and classify it into one of the following categories:

- Hot Lead, Warm Lead, or Cold Lead.

## Action 2: External Action (Create Assistant)

Create a custom assistant inside the ChatGPT API Platform that will act as a Sales Manager. The assistant should include specific instructions for managing leads and responding to customer inquiries.

## Action 3: ChatGPT Conversation (Connect with Sales Manager Assistant)

Use the assistant created in the previous step and provide the lead information (First Name, Last Name, Job Title, Email, and Lead Description). Ask the assistant to generate an email draft to engage with the lead based on the provided data.

## Action 4: Google Sheets (Store Lead Data)

Store the lead data in Google Sheets with the following fields:

- First Name, Last Name, Email Address, Lead Rating (from ChatGPT), and Email Draft (from the Sales Manager)

## Action 5: Gmail (Create Draft)

Automatically create a draft email in Gmail using the response generated by ChatGPT.

## Action 6: Salesforce (Update Lead )

Update the lead rating inside Salesforce based on the classification provided by ChatGPT (Hot, Warm, or Cold).

## Action 7: Slack (Notify Team)

Send a message to the team via Slack, notifying them about the new lead. Include the following information:

- First Name, Last Name, Email Address, Job Title, and Lead Rating.
