

AI-POWERED EMAIL RESPONSE SYSTEM

Trigger: New Email Appears

The automation starts whenever a new email is received in Gmail.

Action 1: Categorize Email Using AI by Zapier

Use AI by Zapier to classify the email into one of four categories:

- Refunds, Support, Account Issue, Others.

Action 2: Split Into Paths Based on Category

Automation branches into four paths: Refunds, Support, Account Issue, and Others.

Path A: Refunds

Action 1: Retrieve Information from Google Docs

Find a file in Google Docs containing details about handling the most common refund inquiries. (This file should be created before)

Action 2: Generate Email Response Using ChatGPT

Provide ChatGPT with the email description and the retrieved Google Docs information to generate an appropriate response.

Action 3: Send Email to Customer

Send the generated email response to the customer.

Action 4: Save Email Details in Notion Database

Save the following details in a Notion Database:

- Email Subject, Body, Sender Email, Date, Type (Refunds).

Action 5: Notify Team in Slack

Send a Slack channel message to notify the team about the new refund request.

AI-POWERED EMAIL RESPONSE SYSTEM

Path B: Support

Action 1: Retrieve Information from Google Docs

Find a file in Google Docs containing details about handling the most common support inquiries.

Action 2: Generate Email Response Using ChatGPT

Provide ChatGPT with the email description and the retrieved Google Docs information to generate an appropriate response.

Action 3: Send Email to Customer

Send the generated email response to the customer.

Action 4: Save Email Details in Notion Database

Save the following details in a Support Database:

- Email Subject, Body, Sender Email, Date, Type (Support).

Action 5: Create Deadline Using Formatter

Add 2 days to the current date to set a deadline for addressing the support inquiry.

Action 6: Create Task in Asana

Create a task in Asana with:

- Title (Email Subject), Note (Email Description), Assignee, Due Date (Formatted Deadline), Priority (Low).

Path C: Account Issue

Action 1: Retrieve Information from Google Docs

Find a file in Google Docs containing details about handling the most common account issue inquiries.

Action 2: Generate Email Response Using ChatGPT

Provide ChatGPT with the email description and the retrieved Google Docs information to generate an appropriate response.

AI-POWERED EMAIL RESPONSE SYSTEM

Action 3: Send Email to Customer

Send the generated email response to the customer.

Action 4: Save Email Details in Notion Database

Save the following details in an Account Issue Database:

- Email Subject, Body, Sender Email, Date, Type (Account Issue).

Path D: Others

Action 1: Save Email Details in "Other Emails" Database

Create a new item in the Other Emails Database in Notion with:

- Email Subject, Body, Sender Email, Date.
