

CONTENT IDEA AUTOMATION

Trigger: New Google Forms Submission

This automation triggers whenever a new form is submitted in Google Forms.

- Fields in the Form: Title, Description, Type (YouTube Video, Social Media Post, Blog Post), Priority (High, Medium, Low).

Action 1: Save Data in General Notion Database

Save the form responses into a General Content Ideas Database in Notion.

- Fields in Notion Database: Title, Description, Type, Priority.

Action 2: Split into Paths Based on Type

The automation branches into three paths: YouTube Video, Social Media Post, Blog Post.

Path A: YouTube Video

Action 1: Generate Ideas Using ChatGPT

Ask ChatGPT to generate 5 creative YouTube video ideas based on the submitted content.

Action 2: Add Deadline with Formatter by Zapier

Add 3 days to the current date to create a deadline for the task.

Action 3: Create Task in Asana

Create a task in Asana with: Task Name (Generated Title), Description (Generated Ideas from ChatGPT), Due Date (Formatted Date).

Action 4: Separate Ideas Using Formatter (Text to Line Item)

Use the Text to Line Item Formatter to split the 5 ideas generated by ChatGPT.

Action 5: Loop Through Ideas (Loop by Zapier)

Create a loop to iterate through each idea.

Action 6: Save Ideas in Notion Database

For each idea, create an item in a dedicated YouTube Ideas Database with: Title, Description, Priority, Deadline.

CONTENT IDEA AUTOMATION

Path B: Social Media Content

Action 1: Generate Draft Using ChatGPT

Ask ChatGPT to draft a social media post based on the content provided.

Action 2: Save Draft as File in Google Drive

Create and save a file in Google Drive containing the drafted post.

Action 3: Save Post in Social Media Database

Create an entry in a dedicated Social Media Content Database in Notion with: Title, Description, ChatGPT Draft, Date.

Action 4: Notify Team in Slack

Send a Slack channel message notifying the team that a new social media post draft has been created.

Path C: Blog Post

Action 1: Generate Blog Post Outline Using ChatGPT

Ask ChatGPT to create a detailed blog post outline based on the content provided.

Action 2: Classify Blog Post Type

Classify the blog post as one of the following: Technology, AI, Productivity.

Action 3: Split into Blog Post Type Paths

Create three sub-paths based on the classification.

Action 4: Notify Team in Slack (Each Sub-Path)

Send a Slack channel message notifying the team about the new blog post outline based on its type: Technology (Notify relevant team members),

AI (Notify relevant team members in Slack & Discord), Productivity (Notify relevant team members).
