

TASK ASSIGNMENT SYSTEM

Trigger: New Task in Asana Project

This automation triggers whenever a new task is created in the specified Asana project. Each task will contain:

- Task Name and Task Description.

Action 1: Assign Task Using Custom Assistant

Use a custom assistant trained to assign tasks based on a file that includes details about each worker and their specific skills.

The assistant should review the task description and respond with the email address of the most suitable person to assign.

Action 2: Generate Task Insights Using Custom Assistant

Use a custom assistant, trained on a file containing a comprehensive database of projects, to generate short insights relevant to the new task. These insights will help the assigned employee better understand the task context.

Action 3: Update Task in Asana

Automatically update the Asana task with the following details:

- Assignee: Use the email address provided by the custom assistant.

Action 4: Notify Team via Slack

Send a Slack message to the team, notifying them of the new task assignment. Include the following information:

- Task Name.
- Mention the assigned employee (using their email) to prompt them to review the task in Asana.
- Insights: Include the insights generated with the custom assistant.
